REFLECT-TEC® Heat-Reflective Roof Coating utilizes **Kynar®** technology and is designed for tile and metal roofing surfaces only. These sample reproductions are an approximation of color and do not denote the actual color or sheen and vary according to specific batch. Colors also vary depending on lighting conditions, substrate and exposure. Custom colors are also available upon approval by TCA but are subject to longer lead times. Colors shown in semi-gloss, satin finish also available.

Percentage of peak cooling load reductions are based on models generated from the "Roof Savings Calculator" Beta Release v 0.92 Oak Ridge and Lawrence Berkeley National Laboratories. Cooling costs savings, percentage of peak cooling load and surface temperature reductions will vary based on colors chosen, geographical location, climate condition, and substrate type. In some climates, there may be a heating penalty. For more information, see textcote.com
