

# ***Energy Efficiency Benefits of “Cool” Walls***

**André Desjarlais**

**Oak Ridge National Laboratory**

**6 February 2009**

# ***Presentation Summary***

- **Is energy efficiency in buildings and walls important? Some statistics.....**
- **What is ORNL?**
- **What research is going on to measure energy benefits of “Cool” Walls?**
- **What are the energy savings of this technology?**

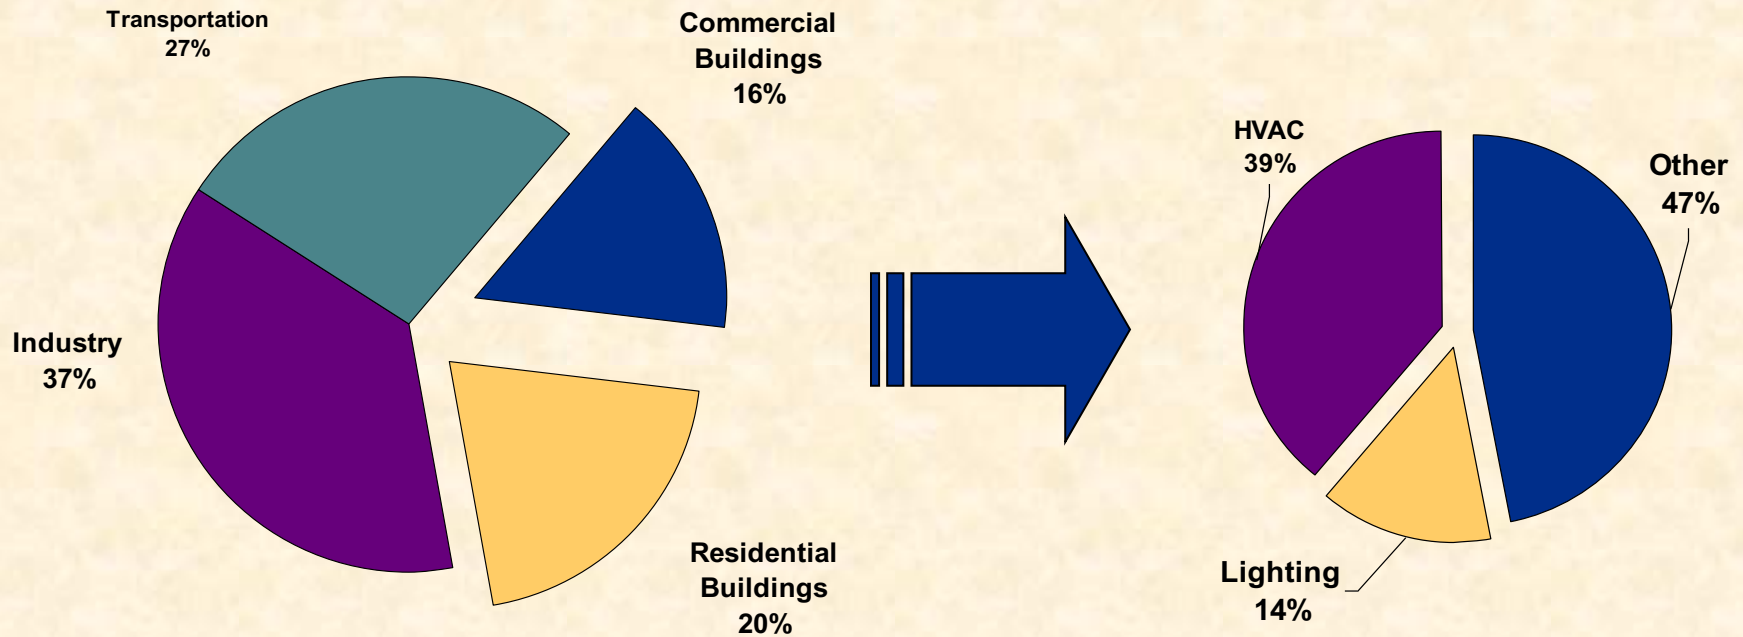

# ***Buildings Use a Lot of Energy***

**1/3 of all energy  
and 2/3 of all  
electricity used in  
the US  
\$220 billion in  
annual energy  
costs**

**Source: US Department of  
Energy, Gensler Associates**

# Energy Consumption in Buildings

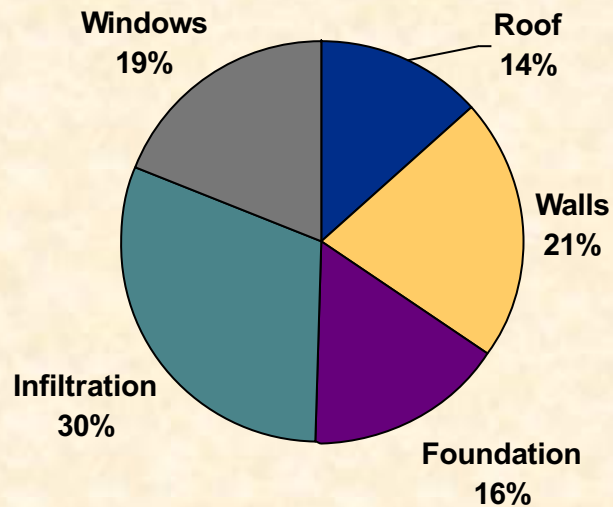

## Total Building Envelope Energy Loss:

13.4 quads

14% of energy in US economy and about 3.5% of the world

# Energy Consumption in Buildings

## Heating Load

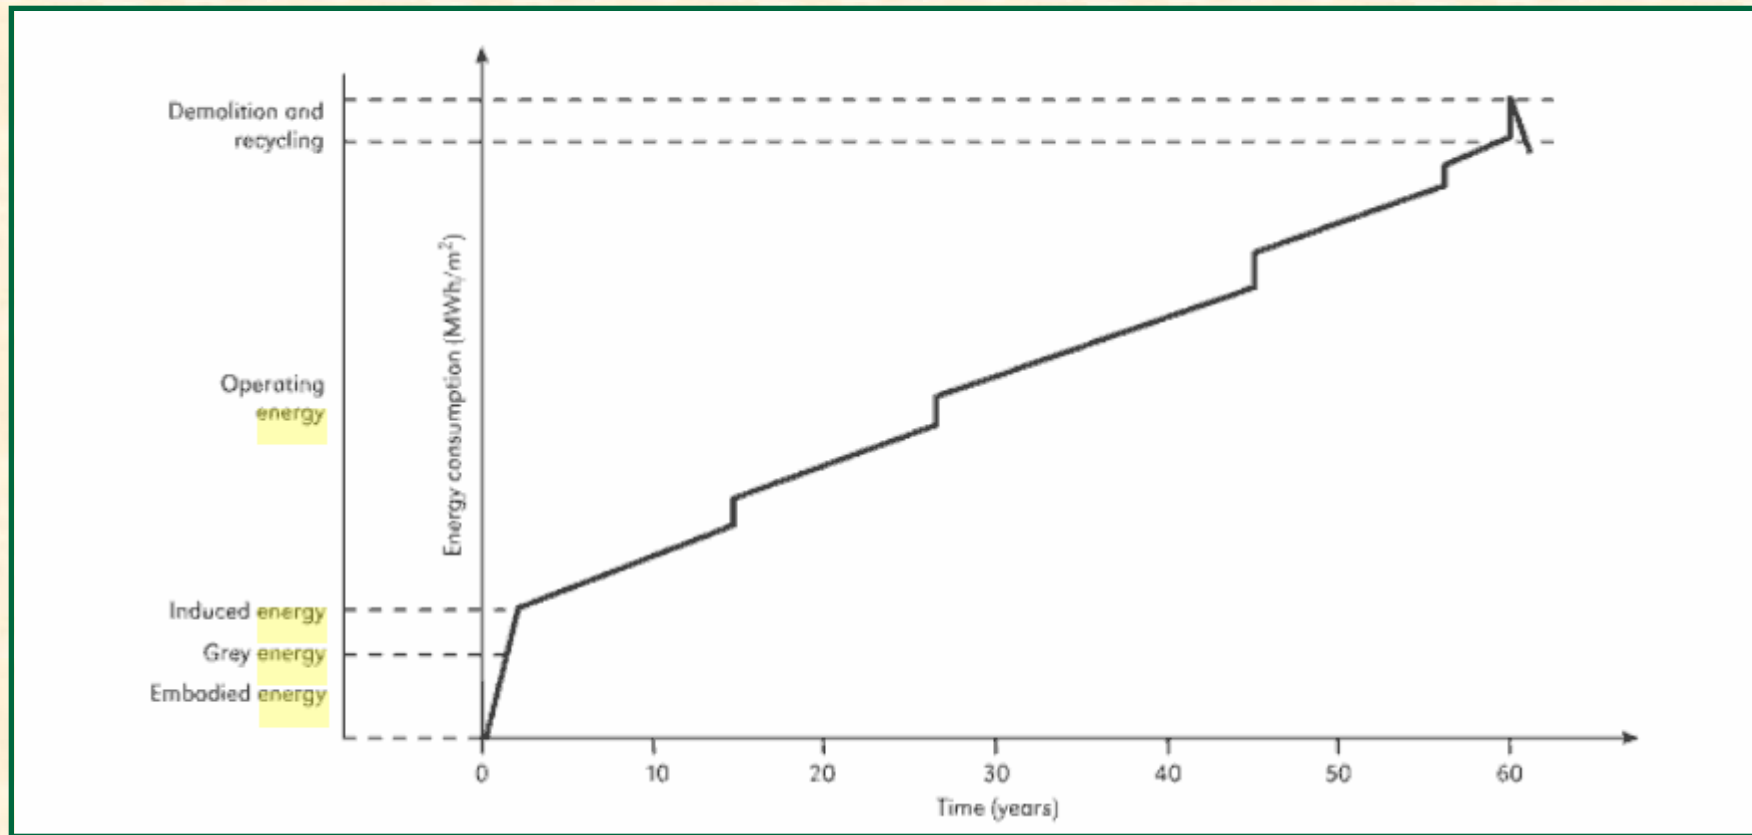

## Cooling Load

# ***DOE Building Technologies Goal***

**By 2025, the Program will create technologies and design approaches that enable the construction of net-zero energy buildings at low incremental cost.**

# The Zero Energy Building

**ZEH-100 Saves 100% of Traditional Household Energy Use**

# ***Can ZEB be Reached? Aug Total Energy Bill \$14.52***

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

  
**UT-BATTELLE**

# ***Oak Ridge National Laboratory was Established during World War II***

**Senator  
Kenneth D. McKellar**

**The Graphite Reactor was the world's first  
continuously operated nuclear reactor**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

  
**UT-BATTELLE**

# ***ORNL's Mission has Continuously Evolved Since 1943***

**Manhattan Project**

**Cold War**

**Multi-purpose Science**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

  
**UT-BATTELLE**

# ***Today, ORNL is DOE's largest multipurpose science laboratory***

- **\$1.04 billion budget**
- **3,900 employees**
- **3,000 research guests annually**
- **Nation's largest unclassified scientific computing facility**
- **Nation's largest science facility: the \$1.4 billion Spallation Neutron Source**
- **Nation's largest concentration of open source materials research**
- **Nation's largest energy laboratory**
- **\$300 million modernization in progress**

# ***We Operate User Facilities that Serve the Research Community***

**Buildings  
Technology  
Center**

**High Flux  
Isotope  
Reactor**

**High  
Temperature  
Materials  
Laboratory**

**Metals  
Processing  
Laboratory  
User Center**

**National  
Environmental  
Research  
Park**

***Providing access to unique and expensive tools and facilities  
for cutting-edge research***

**OAK RIDGE NATIONAL LABORATORY

**UT-BATTELLE**

# Quiz

With Comfort and Energy Efficiency in mind,  
which car do you select to drive in the Las  
Vegas during the summer?

# ***Proof of Concept***

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

**UT-BATTELLE**

# Solar Energy Spectrum

# ***Critical Properties***

**Reflectance ( $\rho_{\text{solar}}$ )**

**Emittance ( $\epsilon_{\text{IR}}$ )**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

  
**UT-BATTELLE**

# $\rho_{\text{solar}}$ *and* $\epsilon_{\text{IR}}$ *are Both Very Important*

# ***Working with Industry Partners***

- **Team with metal roof, single ply membrane, and roof coating associations and their members and Textured Coatings**
- **Federally co-funded**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

  
**UT-BATTELLE**

# Camouflage Invisible to Night Vision

Conventional Film

Near Infrared Film

OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY

UT-BATTELLE

# Conventional vs. Infrared Pigments

# Solar Energy Spectrum

# ***What About Nanoinsulation and Ceramic Bead Additives to Coatings?***

- **Coatings do not have R-value; gain energy savings from reflecting solar radiation**
- **Numerous unsubstantiated claims in the marketplace**
- **In 2001 ORNL demonstrated coating with “ceramic beads” equal to a unfilled paint in terms of energy savings**
- **In 2004, FTC fines Kryton Coatings for their “Liquid Siding” Product**

# ***Overview: Scope of Work***

- **Compare thermal performance of walls with cool (high infrared reflectance) and standard colors**
- **Use Textured Coatings of America's SuperCote Platinum and SuperCote products**

## ***Overview: Scope of Work***

- **Phoenix site: Stucco-coated with various constructions facing east, south, southeast and southwest already covered with Mountain Gray color. Install instrumentation and recoat test areas.**
- **Jacksonville site: Wood siding facing south already covered with Underseas color. Install instrumentation and recoat test areas.**
- **Oak Ridge campus site: Bare stucco-coated test area facing south. Add instrumentation; prime and coat test areas.**

## ***Phoenix Site***

- **Single-story wings with central vaulted ceiling area for family room + dining room/kitchen**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

**UT-BATTELLE**

## ***Phoenix Site***

- **Southeast and southwest exposures on walls of office in west wing. Outside temperature sensors attached to 10<sup>3</sup>/<sub>4</sub> in. thick walls**

## ***Phoenix Site***

- **Add gypsum panels for instruments to sense inside temperatures and heat flow through walls**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

  
**UT-BATTELLE**

## ***Phoenix Site***

- **Data logger transmits data through modem to computer at Oak Ridge over dedicated line**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

**UT-BATTELLE**

# ***Jacksonville Site***

- **Two-story house on Ponte Vedra beach**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

  
**UT-BATTELLE**

# ***Jacksonville Site***

- **South-facing test exposures outside family room above steps from deck that faces ocean**

**Meter  
for wall  
solar  
between  
test  
areas**

## ***ORNL Site***

- **Stucco test section on south wall of Envelope Systems Research Apparatus (ESRA)**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

**UT-BATTELLE**

## **ORNL Site**

- **Underseas Supercote Platinum (IR) on right stud space and upper half of middle; Supercote (Non) on rest except for strip of uncoated primer at bottom**

## ***ORNL Site***

- **Add gypsum panels on inside like at Phoenix and Jacksonville sites**

## **ORNL Site**

- **Computer dedicated to ESRA data acquisition records detailed thermal performance**

**OAK RIDGE NATIONAL LABORATORY  
U. S. DEPARTMENT OF ENERGY**

  
**UT-BATTELLE**

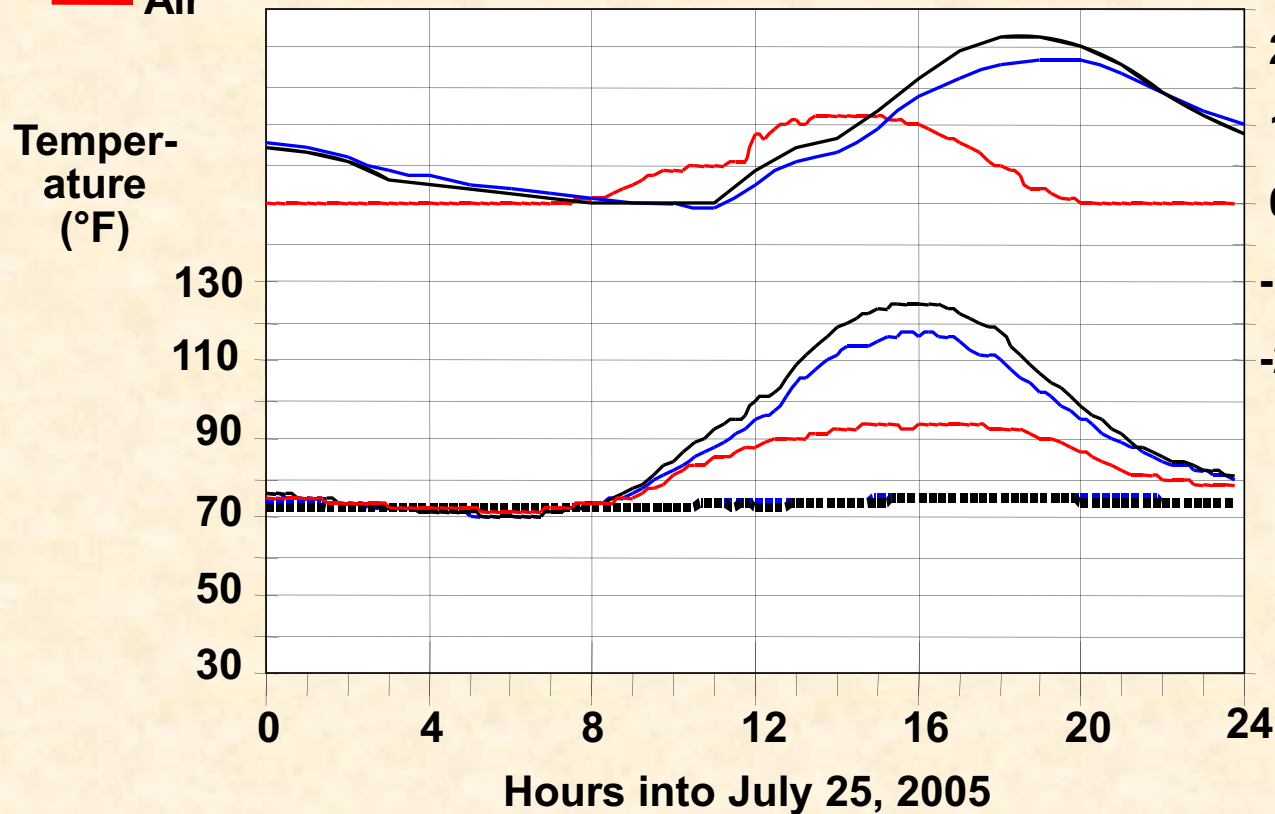

## **ORNL Site**

- **Data starting 7/30/04 with coating on 8/3/04. Data acquisition through August 2005**
- **Check consistency of data with program to estimate wall properties from temperature and heat flux measurements. Data very consistent from month to month**
- **Behavior of solar radiation control on vertical walls more complicated than low-slope roofs. Difficult to generalize simply**

# ORNL Site: Non vs IR -- Summer Day

— Non Outside  
 ..... Non Inside  
 — IR Outside  
 ..... IR Inside  
 — Air

— Wall Solar  
 — Non Heat Flux  
 — IR Heat Flux

- Air temp warmer but wall solar lower vs 4/16/05
- Behavior of Non and IR again same at night
- Peak temps again consistent with coatings over primer

## ***Model for Wall Behavior***

- **Seek a model that can be generalized to give results for whole buildings**
- **Have done extensive validation of a model in DOE 2.2 for a 1100 ft<sup>2</sup> ranch house**

- **Heat/cool with heat pump: 68°F winter; 76°F summer; size heat pump for climate**
- **Occupy with 3 people + Building America energy use profiles**

# Model for Wall Behavior

- To validate model, generate climatic data from ORNL weather station records for year of test
- Use properties of wall materials along with construction details for test section

# Solar Reflectance of Coatings

- Samples over primer: Mountain Gray (Phoenix) and Underseas (Jacksonville and ORNL) 7/2/04

Mountain Gray Supercote Platinum	0.44
Mountain Gray Supercote	0.30
Underseas Supercote Platinum	0.51
Underseas Supercote	0.25

- Jacksonville on wood siding and existing coating 12/8/04

Underseas Supercote Platinum	0.40
Underseas Supercote	0.24

- ORNL on Stucco

		8/4/04	9/27/04	5/18/05	8/3/05
Texcote Primer	0.71	0.67	0.72	0.66	
Underseas Supercote Pt		0.49	0.50	0.49	0.49
Underseas Supercote		0.24	0.24	0.24	0.24

Use averages

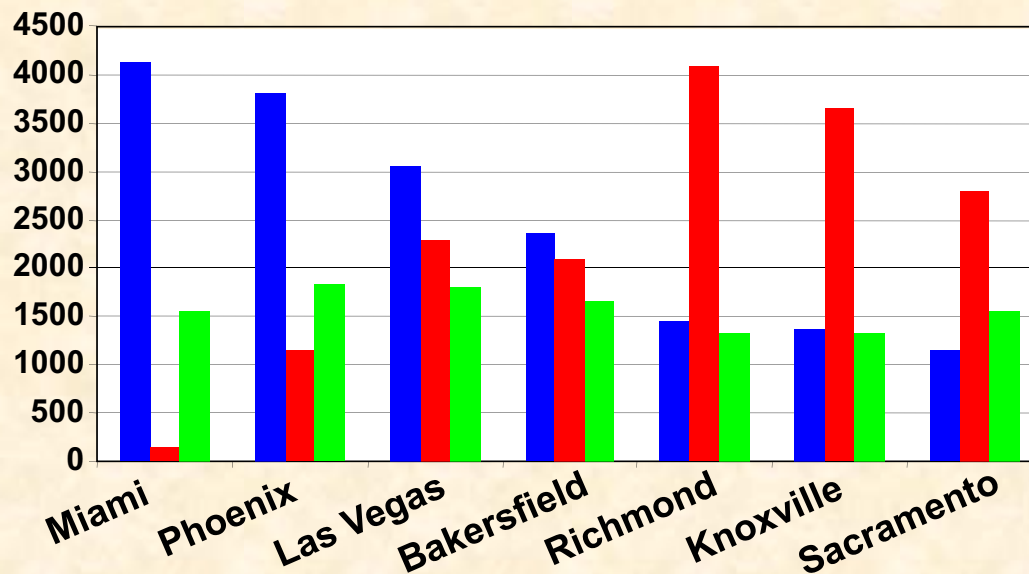

## ***Features of DOE 2.2 of interest***

- **Can specify wall and solar reflectance of exterior surface and nearby ground**
- **Sun tracked hour by hour and can shade exterior surfaces by building and landscape**
- **Simulation of annual energy use by heating and cooling system includes response to thermostat schedules and to thermal mass in envelope**

# Model Generalizations

- Building America Performance Analysis Resources at [http://www.eere.energy.gov/buildings/building\\_america/pa\\_resources.html](http://www.eere.energy.gov/buildings/building_america/pa_resources.html) gives energy use profiles for three occupants (3 BR home). Choose to heat and cool with air-to-air heat pump (76°F cooling; 68°F heating; no setup or setback)
- Choose seven different climates to show response of typical house to cooling and mixed climates of interest

- CDD65 (°F-day)
- HDD65 (°F-day)
- Average Daily Solar (Btu/ft²)

- Cities arranged by decreasing cooling degree days

# Model Generalizations

- IR reflective coating on conventional walls saves cooling energy. Savings are 4% to 9% compared to non-IR reflecting walls

Annual Electricity for Cooling (kWh)

- Non Walls
- IR Walls

- Absolute savings vary from +240 (Phoenix) to +110 (Richmond)

# Model Generalizations

- IR reflective coating on CMU walls shows larger savings of cooling energy. Savings are 6% to 13% compared to cooling energy with non-IR reflecting walls

Annual Electricity for Cooling (kWh)

- Non Walls
- IR Walls

- Absolute savings vary from +360 (Phoenix) to +160 (Richmond)

# ***Project Summary***

- **Demo sites in Phoenix and Jacksonville depict energy savings**
- **Full year of ORNL data validated DOE 2.2 model**
- **Complexity of real wall applications (different orientations, shading and construction) makes generalization very difficult**
- **DOE 2.2 whole building annual energy estimates for ranch house show that IR reflecting pigments save 4% to 13% of cooling energy**

# Project Summary

- Cooling a 1100 ft<sup>2</sup> ranch house in various climates

# ***Energy Efficiency Benefits of “Cool” Walls***

**Questions or comments?**
